
Teller Transaction Monitoring

Understanding CU*BASE Teller Analysis Reports

INTRODUCTION

With the increasing cost of manning a teller line, credit unions are now looking more carefully at ways to schedule their front-line staff more efficiently and cost-effectively. The importance of carefully managing the performance and workload of front-line staff becomes a top priority for today's credit union leadership.

How many deposits do your tellers handle each day? What would be the impact on your operational costs if these members could be encouraged to sign up for Direct Deposit or use ATM services?

CU*BASE teller transaction reports are designed to make this task easier. The reports let you get into the details needed for balancing and monitoring cash drawers, while also helping you to watch for trends and find opportunities to increase productivity and make the most of valuable resources.

As described below, there are many different ways to analyze teller activity, and each will give slightly different results based on which data is used.

HOW TELLER ACTIVITY IS ANALYZED

CU*BASE offers several ways to help you track teller transaction volume. How you use the reports and inquiries, and which ones you will rely on, will depend on how you wish to track your teller activity. First, it is helpful to remember that there are three different “classes” of transactions that are posted through the teller system:

Transactions that hit a teller drawer but do NOT cause a member transaction ¹	<i>Example:</i> Cashed checks
Transactions that hit a teller drawer AND cause a member transaction	<i>Example:</i> Deposits, withdrawals
Transactions that cause a member transaction only but do NOT affect the teller drawer	<i>Example:</i> Transfers ² using Proc Code “T”; corporate check/money order withdrawals

¹Cash-for-cash transactions are not considered part of this group. These are, however, included in the CSHCHK file, which is analyzed by the Cash Activity Analysis inquiry on menu MNHTLA. (Refer to the Teller & Cash Activity Analysis Tools” booklet for details.)

²If funds are “transferred” by simply entering a deposit amount on one account and the same amount as a withdrawal on another account on the Teller Deposits/Withdrawals screen, the withdrawal is actually considered a drawer transaction because CU*BASE takes cash from the drawer then turns right around and deposits it into the other account. Using the Proc Code flags the transaction as a true transfer.

The way in which you approach your analysis of teller transactions can give different results. What is the appropriate volume analysis? Which one is right for you? Maybe all of them . . . but you must keep in mind what data is being represented by each method.

Learn About Other Teller Analysis Tools

In addition to the reports described here, be sure to read about additional teller analysis inquiry tools in the Teller & Cash Activity Analysis booklet.

This booklet describes the tools available on the MNHTLA Teller & Cash Analysis Tools menu, including teller activity by time of day, day of the week, day of the month, and transaction type.

TELLER CLOSING TRANSACTION AUDIT REPORT (LTLAU2)

This report is created automatically during end-of-day processing and is used primarily to assist with teller drawer balancing questions. The report counts **audit key** transactions—transactions that hit the teller drawer. This report does not show any transactions that do not affect the teller drawer (such as transfers using Proc Code “T” or corporate check/money order withdrawals).

There are six sections for each teller (although a section will print only if there have been transactions of that type during the day):

1. Deposits / Payments
2. Miscellaneous Receipts
3. Miscellaneous Advances
4. Outside Checks
5. In-house Drafts
6. Cash Withdrawals / Disbursements

Each section of the report shows each individual transaction record, then a total representing the number of items in that section. At the end of the five sections is a grand total of all audit key records, followed by a summary from teller drawer control records.

The following sample report shows just a few lines from each of the sections of the report:

- ◆ TELACT (teller drawer control records for the summary proof sheet)

TELLER ACTIVITY ANALYSIS (LTEACTAP1)

This report can be pulled at any time to analyze teller activity for a certain period of time. Like the daily report, this report counts audit key transactions—transactions that hit the teller drawer. This report does not show any transactions that do not affect the teller drawer (such as transfers using Proc Code “T” or corporate check/money order withdrawals).

MNRPTD #27 “Teller Activity Analysis Report”

The screenshot shows the 'Teller Activity Analysis' configuration window. The 'Report Options' section is on the left, and the 'Response' section is on the right. The 'Date range from' is set to 'Jan 01, 2008' and 'To' is 'Mar 31, 2008'. The 'Report type' is set to 'D = Detail'. The 'Starting time' is '07:01 [HHMM]' and the 'Ending time' is '07:02 [HHMM]'. The 'Time block increments' is set to '3 = 15 minutes'. The 'Response' section has a 'Job queue' checkbox checked, 'Copies' set to '1', and 'Printer' set to 'P1'. A 'Cancel' button is located at the bottom left of the 'Report Options' section. The status bar at the bottom shows 'FR (904) 7/01/08 14:37:20' and a 'Learn About This Feature' link.

The report is very flexible and can be pulled in a detail or summary format. Use this screen to specify exactly which time blocks should be reported on the analysis, as well as select specific transaction types for detailed analysis.

*For details on completing the fields on this screen, please refer to CU*BASE GOLD Online Help (click [Learn About This Feature](#)) while working on this screen.*

Below are sample pages from both the Detail and Summary Teller Activity Analysis Reports. Both reports were run in half-hour increments, starting at 9:30 a.m. and ending at 5:30 p.m. On the Detail report, each Branch/Location begins on a separate page.

Notice that the rows marked “T” represent the number of actual transactions processed, and rows marked “M” show the number of actual members represented by those transactions.

NOTE: This file is simply a cumulative file that contains the detail records from TEAUDT1 and TEAUDT2. This file stores the records for long-term analysis, since the TEAUDTx files are refreshed daily.

TELLER ACTIVITY REPORT (LTLACT)

This report can be pulled at any time to analyze all transactions processed via the teller system. This report is unique in that in addition to a summary of teller drawer control totals, it also provides a total count of audit key transactions that hit the teller drawer, as well as cash transactions that are in the daily temporary teller work files.

MNHTEL #19 "Teller Activity Report"

*For details on completing the fields on this screen, please refer to CU*BASE GOLD Online Help (click [Learn About This Feature](#)) while working on this screen.*

Transactions are summarized for each teller by day, for a specified time period. The samples below are for a single teller.

MEMBER TRANSACTION ANALYSIS (CU*BASE REPORT BUILDER)

If you would like to know the number of members a teller waited on during any given day, you can create a custom report or inquiry using the **member transaction files**, searching for all transactions with an Origin Code of 01 (Teller Processing). Specifications to use in your custom report:

Files:

- ◆ TRANS1 (current-month savings and checking transaction history)
- ◆ TRANS2 (current-month loan transaction history)
- ◆ TRANS3 (current-month certificate transaction history)

Selection Criteria:

Combine (And/Or)	Field Name	Comparison	Criteria (Field, Number, 'Text', etc.)
	TRORIG	EQ = Equal To	01

Using Report Builder features you can sort by time, gather member numbers and totals, look at specific transaction descriptions, and more.

*For details on completing the fields on this screen, please refer to CU*BASE GOLD Online Help (click [Learn About This Feature](#)) while working on this screen.*
